

# 2020

## IN REVIEW:

### OVERCOMING CHALLENGES, PEOPLE FIRST

#### NOTABLE PROJECTS:

**2020 was a year of challenges.** The year began smoothly as we began settling into our new ownership within the ASRC Industrial (AIS) family. Then, within one week, the COVID-19 pandemic brought our scheduled work to a grinding halt.

**Tough times bring out the best in organizations.** We made temporary changes to staffing and pushed hard to regain backlog to ensure that we were in an excellent place to rebound. It is a result of the faith placed in us by AIS and the caliber of NWDD's stellar team that 2020 will finish strong.

In such a difficult year for all, it was important that we maintained our commitment to help improve the communities in which we live and work. Through contributions of food, supplies, and charitable giving, we remain steadfast in pursuit of our enterprise purpose **to leave things better than we found them.**

**2021 looks bright for us;** We are hopeful for a return to normalcy and the opportunity to continue providing high end technical services over a broad geographic range and strengthening our role within the AIS family.

**Submarine Support Facility Demolition**  
PEARL HARBOR, HI

NWDD was contracted to demolish various support structures within the Controlled Industrial Area of Pearl Harbor. NWDD mobilized a specialized high reach excavator to systematically wreck the taller onsite structures, preparing the suspended gantry system for removal via crane. The presence of contaminants such as PCBs, lead, and chromium required significant waste management coordination within the secure area. In total, over 4,100 tons of concrete and "special waste" was removed from site.

**RTK Cooling Tower Decommissioning**  
SALT LAKE CITY, UT

NWDD contracted with long-term client Rio Tinto to begin the decommissioning of their Kennecott Mine Power Plant. For this initial phase, NWDD removed a series of large cooling towers. Due to the presence of hazardous materials, the tower debris was carefully segregated and managed fully to final disposition.

**Aluminum Smelter Selective Demo**  
SPOKANE, WA

Working with our sister company, EQM, NWDD provided selective demolition services to remove the asbestos/PCB-bearing siding from multiple buildings on an EPA site. NWDD worked to provide ingress into the structures for EQM crews to begin the labor-intensive remediation process.

**Michel's Compressor Removal**  
KENT, OR

NWDD was contracted for the removal of two compressor buildings/warehouses associated with the TC Energy natural gas pipeline. During demolition, the remaining plant stayed online, with gas moving throughout the facility. The compressor building demolition consisted of a turbine compressor, miscellaneous equipment, and a robust support structure including an overhead crane.

**McMurdo Station Demolition**  
ROSS ISLAND, ANTARCTICA

Following the successful consulting effort at McMurdo Station in 2019, NWDD was retained to perform the demolition of various structures to aid in the redevelopment goals of the base. This involved both full scale structural demolition as well as the selective removal and interior preparations for work in future seasons.

#### Continuing a Culture of Giving (L and R)

- (Left) Showing off our specialized R/C equipment, we ran a demo for a class of local middle schoolers - the next generation of operators!
- (Right) When one of our remote projects was postponed, it didn't feel right to sit on much needed supplies. So we decided to donate— all of it. We hauled a trailer full of food and dry goods to a local nonprofit working to feed the homeless.

#### BY THE NUMBERS:

- 4 CONSECUTIVE YEARS OF ZERO SAFETY INCIDENTS
- 4 TIME ZONES WORKED

- 1k POUNDS OF FOOD & SUPPLIES DONATED
- 7 STATES & TERRITORIES WORKED
